6. Faculty to student ratio in professional studies courses:

Definition: Professional studies courses are those with architectural content required of all students in the NAAB-accredited program and are the core of a professional degree program that leads to licensure. Knowledge from these courses is used to satisfy Condition 3-Program and Student Criteria.

Faculty-to-student ratios are calculated as the total number of full-time-equivalent faculty teaching the total number of full-time-equivalent students enrolled in the program (for program faculty to student ratio) or in the classes (such as professional courses).

The ratio for professional studies courses should include all courses in the program, including studio courses. The ratio for studio courses is a sub-set of professional studies courses.

The ratio is 1 (faculty): X (number of students). Enter only the number of students. If the ratio is 1 faculty member to 21 students, enter 21.

2. Graduation rate by track

Definitions: Advertised program length is the amount of time necessary for a student to complete all requirements for a degree or certificate, according to the institution s catalog.

The graduation rate should be calculated separately for each trackif tracks have different advertised program lengths. Programs should work backward from the reporting year to identify the entering semester of the cohort graduating at 150% of the advertised program length at the end of the reporting year. For this same cohort, the graduation rate should also be calculated for students who graduated in 100% of the advertised program length. Programs should not report graduation rate data until a cohort has reached 150% of the advertised program length. At that time, the program will report the graduation rate for students from the entering cohort who graduated in 100% and 150% of the advertised program length.

For example, in a two-year track, students graduating in 100% of program length would have graduated in two years and students graduating in 150% of advertised program length would have graduated in three years. Therefore, subtract three years from the reporting year to find the entering cohort for the graduation rate question.

To calculate 150% of program length, multiply the advertised program length by 1.5. If this results in a decimal, round up. For example, students graduating in 150% of the advertised program length for a five-year program would graduate within eight years (5 \times 1.5 = 7.5, round to 8 years).

Example: Fifty (50) students entered a two-year program in fall 2021 (2021-2022 academic year). 25 (50%) of those students graduated in two years, in 2024 (100% of program length). An additional 15 students graduated in 2025 (150% of program length), bringing the graduation rate to 80%.
