The main purpose of the journal is to provide a platform through which researchers, educators, practitioners, and other professionals from multiple organizations and disciplines around the world, can share evidence-based knowledge and research on a wide array of hazards and disasters across all disaster phases. The journal highlights important issues of theory, research, planning, policy, and multiple aspects of risk, hazards, emergency and disaster prevention and mitigation, preparedness, response, and recovery. IJMED encourages submissions that rigorously investigate how social and economic systems and processes, policy, and inequality can shape vulnerabilities, methodological work that highlights cultural, contextual, and ethical challenges of conducting disaster and hazards research, and teaching pedagogies for experiential learning, community outreach, and curricular issues in the professionalization of emergency management and broader disaster sciences.
